SUMMARY

Applied AI and systems engineer with one continuous independent technical practice since 2020, incorporated as One Asec LLC in 2021. The work has moved up the stack in three phases: ground-up business, IT, and financial systems for three automotive companies; enterprise retail IT delivery for a 14-site, 200+ user client; and, since September 2025, applied AI products. Today I architect systems, orchestrate AI coding agents to build software, and audit the result so execution is verifiable. Financial mathematics background. I am strongest where a business process has to become working, checkable technology.

TECHNICAL SKILLS

Applied AI: systems architecture, AI agent orchestration, agent-assisted software development, code review and audit of agent-generated code, governed context and evidence systems, voice and coding-agent workflows, accessibility-tree browser automation

Working practice: full-time daily use of frontier LLMs and coding agents across design, implementation, and review; rapid adoption of new models, agent frameworks, and evaluation methods as they ship

Languages & data: Python, SQL, transaction reconciliation scripting, financial workflow automation

Enterprise IT: Microsoft Entra ID, Microsoft Intune, Active Directory, Jira, identity and endpoint administration, asset tracking, multi-site technical support and escalation

Business systems: QuickBooks general ledger setup, point-of-sale and inventory systems, local network routing, diagnostic workstations, entity formation and compliance setup

Ways of working: customer discovery, requirements translation, implementation ownership, forward-deployed client delivery, verification before sign-off

EXPERIENCE

One Asec LLC — Systems Engineering & Applied AI Practice

2020 – Present

Applied AI & Systems Engineer

Independent practice established 2020; incorporated as One Asec LLC in 2021. Every engagement below was delivered through this practice. Clients and intermediaries are named as such; they are not separate employers.

Applied AI Products

Sep 2025 – Present

Architecture, agent orchestration, and code audit across Northsun, HeyCLI, BrowseFlow and Dockerfile.ai

- Own technical direction for each product: define system boundaries, data and evidence models, and the interfaces agents and operators use.
- Orchestrate AI coding agents to implement against those designs, running multi-session work in parallel and keeping each session scoped to a reviewable change.
- Review and audit agent-generated code and implementation decisions before they land; treat generated output as a draft to be verified, not finished work.
- **Northsun** — AI-agent infrastructure: governed context so agents receive and use information within defined boundaries, and evidence systems so every stored fact carries its source and time.
- **HeyCLI** — voice and coding-agent orchestration: translates spoken or typed operator intent into coordinated software-building workflows across multiple agent sessions.
- **BrowseFlow** — accessibility-tree browser automation: structured page perception connected to agent-driven execution, with approval points for consequential actions.

Enterprise Retail Systems — ETRO Fashion US (client)

Apr 2024 – Jul 2025

Independent IT contractor, subcontracted through Vox Elements (intermediary) and billed through One Asec LLC

- Delivered multi-site technical support for an enterprise retail environment of 200+ users, 14 retail sites, and 500+ tracked assets.
- Administered identity and endpoint operations in Microsoft Entra ID, Active Directory, and Microsoft Intune: accounts, access, device enrollment and policy, and endpoint remediation.
- Ran the technical support workflow in Jira across all sites, connecting store and office user needs to infrastructure and device work and escalating cross-site issues.
- Carried asset and systems responsibilities alongside frontline troubleshooting, keeping the 500+ asset inventory accurate through moves, replacements, and new-site needs.
- Operated as an independent client-delivery engagement: scoped work with the client, executed it, and reported through the intermediary.

Commercial Business, IT & Financial Infrastructure

2020 – 2024

Client builds: Autoblitz LLC (NJ) · Carfix LLC (NJ) · Exquirit Auto Repair (Mount Vernon, NY). Dates are the overall engagement period.

- Built business, computing, network, and operational infrastructure from the ground up for three distinct automotive businesses.
- **Business setup:** entity formation, state registrations, EIN and tax IDs, and compliance foundations, coordinating with the owners' licensed professionals where required.
- **IT infrastructure:** local network routing, diagnostic computer workstations for service bays, and point-of-sale and inventory systems supporting daily operations.
- **Financial operations:** QuickBooks general ledger setup and financial workflows that connect operational transactions to accounting records.
- **Automation:** authored Python and SQL scripts to reconcile daily transactions against bank ledgers, applying quantitative reasoning to practical business controls.

Vital Life — Ottawa, ON

Jan 2019 – Jan 2020

Financial Operations & IT Specialist

- Owned bookkeeping, budgeting, KPI reporting, CRM, invoicing, and monthly reporting while expanding the company's marketing and IT foundation.

SELECTED PRODUCTS

Northsun — memory and enrichment infrastructure for AI agents; gate-first governance and sourced, time-stamped evidence on every fact. Role: architecture, agent orchestration, code audit.

HeyCLI — voice multi-session orchestrator routing work to coding agents. Role: architecture and implementation ownership.

BrowseFlow — agent-agnostic browser automation built on the accessibility tree, with approval queues and run evidence. Role: design and implementation.

Dockerfile.ai — container-workflow tooling. Role: contributor.

Current status for each product is kept at abdur.ai/hire.

EDUCATION & CREDENTIALS

B.S. Financial Mathematics & Economics — University of Ottawa

CompTIA Security+ — earned July 2024

Cybersecurity Certificate — Coding Dojo / Colorado Technical University, 24-week intensive (2023–2024)

Work authorization: U.S. citizen; no sponsorship required
