SUMMARY

Applied AI and systems engineer running one continuous independent practice since 2020. I architect systems, orchestrate AI coding agents to build software, and audit the output so execution is verifiable. Current work: agent infrastructure (Northsun), voice and coding-agent orchestration (HeyCLI), accessibility-tree browser automation (BrowseFlow). Earlier: enterprise retail IT for a 14-site, 200+ user client, and ground-up business, IT, and financial systems for three automotive companies. Financial mathematics background.

TECHNICAL SKILLS

Applied AI: systems architecture, AI agent orchestration, agent-assisted development, audit of agent-generated code, governed context and evidence systems, voice and coding-agent workflows, accessibility-tree browser automation

Working practice: full-time daily use of frontier LLMs and coding agents across design, implementation, and review; rapid adoption of new models, agent frameworks, and evaluation methods as they ship

Languages & data: Python, SQL, transaction reconciliation scripting, financial workflow automation

Enterprise IT: Microsoft Entra ID, Microsoft Intune, Active Directory, Jira, identity and endpoint administration, asset tracking, multi-site support

Business systems: QuickBooks general ledger setup, point-of-sale and inventory systems, local network routing, diagnostic workstations, entity formation and compliance setup

EXPERIENCE

One Asec LLC — Systems Engineering & Applied AI Practice

2020 – Present

Applied AI & Systems Engineer

Independent practice established 2020; incorporated 2021. Engagements below are delivery phases of this one practice, newest first.

Applied AI Products

Sep 2025 – Present

- Architect and ship AI products end to end: own technical direction, orchestrate AI coding agents to implement, and audit every change for verifiable execution before it lands. Also contributed to Dockerfile.ai.
- **Northsun:** AI-agent infrastructure with governed context and evidence systems, so agents act within defined boundaries and every fact carries its source.
- **HeyCLI:** voice and coding-agent orchestration that turns operator intent into coordinated multi-session software-building work.
- **BrowseFlow:** accessibility-tree browser automation connecting structured page perception with agent-driven execution and approval points.

Enterprise Retail Systems — ETRO Fashion US (client)

Apr 2024 – Jul 2025

Independent IT contractor via Vox Elements (intermediary), billed through One Asec LLC

- Supported 200+ users, 14 retail sites, and 500+ tracked assets: identity and endpoint operations in Microsoft Entra ID, Active Directory, and Intune, asset tracking, and the multi-site Jira support queue.

Commercial Business, IT & Financial Infrastructure

2020 – 2024

Client builds: Autoblitzz · Carfixed LLC · Exquisite Auto Repairs (Bronx, NY)

- Built business, computing, network, and financial infrastructure from the ground up for three automotive businesses: entity setup, state registrations, EIN/tax IDs, and compliance foundations.
- Implemented local network routing, diagnostic workstations, and point-of-sale and inventory systems; set up QuickBooks general ledgers and financial workflows.
- Wrote Python and SQL automation to reconcile daily transactions against bank ledgers.

EDUCATION & CREDENTIALS

B.S. Financial Mathematics & Economics, University of Ottawa · **CompTIA Security+**, earned July 2024
